

About the company

Our consulting group is a family of experts in microelectronics, where large companies come for advice in the most daunting semiconductors and microelectronics challenges.

Whatever your view is on high tech electronics, there is always a nice project running in Qplox

We are looking for a technology manager for one of our biggest customers in the Region.

Job Description

- With your expertise in software development you will strengthen our broad and interdisciplinary i-Learn project team. The aim of the i-Learn project is to make digital applications for personalized learning available to our primary and secondary education schools through an open portal so that they can offer their students learning material in a personalized way. This allows them to respond more appropriately to the individuality of each student: to challenge stronger students and to support vulnerable students in a more targeted way.
 - In agreement with the i-Learn software team, you develop a prototype of the platform with which various applications for personalized learning can be offered in a school context.
 - You analyze complex technical problems that can be posed by the users of the platform and you look for and implement solutions based on your good insights into the domain and your technical experience.
 - You analyze the business requirements, then translate and build them incrementally. You pay attention to scalability, maintainability and data security.
 - You work closely with the i-Learn software team to write plans of operation for the further expansion of the platform. You provide the necessary documentation to support future developments.
-

Candidate Description

- You preferably have a master's degree in computer science, or you have a master's degree from another field of study, but you have built up a broad IT knowledge through additional training and / or experience.
 - You are prepared to work in an agile context.
 - You have demonstrable experience with software development.
 - You work proactively and take initiative; you take responsibility and you have good organizational skills.
 - You are flexible, stress-resistant and you can work with deadlines.
 - You are communicative with colleagues and you dare to raise problems.
 - You can work independently, but you are also a real team player.
 - You find learning about your field a pleasure, not a challenge.
 - You are familiar with several of the technologies below:
 - Technologies for web apps (Angular, Node, Express.js, React, ...)
-

- Full Stack (Frontend, backend and database)
- Cloud technologies / deployments (AWS, Google App Engine, Docker, Kubernetes, ...)
- Authorization, authentication, SSO methods (OAUTH 2.0, ...)
- GIT / Bitbucket
- JIRA and Confluence
- LTI (Learning Tools Interoperability) standard, library or similar

We offer

We are proud of our open, multicultural, and informal working environment with ample possibilities to take initiative and show responsibility. We commit to supporting and guiding you in this process; not only with words but also with tangible actions. We actively invest in your development to further your technical and personal growth. Your energy and commitment are appreciated by means of a competitive salary with many fringe benefits.
