ICT Functional Analyst - Project Manager

About the company

Qplox is a fast-growing company offering test and automation engineering. Headquartered in Leuven, with offices in Barcelona and Eindhoven.

Our clients are major multinational enterprises and local companies from automotive, semiconductors, RF, consumer electronics…. Our Test automation group offers a one stop shop for design of automated test benches, system integration production, lab automation and data acquisition systems, with a growing focus in IoT sensor networks.

Our consultancy department offers services in RF, semiconductors and electronics design and test, as well as on the crossing roads of Nanotechnology, Bio-Science Engineering and Biotechnology.

Job Description

You will embrace the variety of working as an ICT Functional Analyst and an ICT Project Manager at the same time, with more focus on the latter.

The assignment

- As a Functional Analyst, you will:

- translate the needs of the business into concrete requirements.
- discuss these requirements with the different ICT teams to build, test and deliver the solution on time, in line with the ICT agile processes.
- be involved in the support and maintenance of the environment.
- as part of your training, to better understand the underlying mechanisms, you will be involved in the application development by our partners, through which you can build up sufficient technical knowledge to support and challenge exiting and new solutions.

- As a Project Manager, you will:

- define and maintain an up-to-date comprehensive committed project plan which identifies project deliverables, work breakdown structure & planning, resources, risks & dependencies.
- coordinate, motivate, encourage, facilitate and support the project team stakeholders in achieving the project objectives.
- manage/coordinate ICT Vendors (software, hardware & consultancy) who are involved in the project.
- bring key elements for decision making to the steerco, indicating their impact and presenting potential alternatives.
- ensure that the necessary change management actions are taken (communication, training, post go live support, ...)
- be end-to-end responsible for the preparation & successful realization/delivery of the features assigned to him/her in line with the project objectives, scope, budget & timeline as defined in the project charter.

Candidate Description

- You have a master's degree, preferably in computer science or engineering.
- Your strong analytic and problem-solving skills enable you to interpret customer requirements and issues.
- We value your extensive track record in project and change management, and project delivery. You have a background in project management methodologies (e.g. PRINCE2 & SAFe), processes and techniques that you apply in a pragmatic way.

- You are a team player and with your no-nonsense attitude, you coordinate your team to get the job done.
- You are a strong communicator who enjoys collaborating with internal ICT colleagues as well as with external development resources.
- You are fluent in English; knowledge of Dutch is a plus.

We offer

An attractive salary package with extra benefits. A high tech, multicultural and young ambient. A fast track in a growing company. Formation in multidisciplinary environment plenty of learning opportunities.
